

10 reasons to choose a Perfecta[®] awning

STRENGTH AND DURABILITY

To prevent twisting, bowing and weathering, Perfecta uses steel, not aluminum, for its galvanized roller tube and powder coated square tube. This adds weight, strength, and longevity to your unit.

E-Z ADJUSTMENTS

Our optional E-Z Pitch adjustment package allows you to easily change the pitch of your awning whenever you choose.

SUPERIOR FABRIC PROTECTION

Only Perfecta offers patented tilting arms which permit the curved front bar to fit snugly against the fabric on the roller tube. This allows the entire cloth cover to be totally protected under the hood for eliminating weather exposure. A clean cover looks better and lasts longer.

STRONGER ARMS

Extra strong Perfecta arms are fitted with special, durable cables and three springs to lessen fabric sag. Smaller projection arms are fitted with three cables and two springs.

VERTICAL FLEXIBILITY

The patented tilting installation bracket is the core piece of every Perfecta awning. When the awning extends, it sets the front bar to the preadjusted position, simultaneously it activates the automatic steel wind-lock. This limits the vertical lift of the arms to protect against windy conditions.

SHEATHED CABLES

New plastic sheathed cables add longevity to the lateral arms used in all Perfecta products.

HORIZONTAL FLEXIBILITY

Horizontal flexibility and longevity has been increased due to the new ball and socket style front bar connector.

GORTEX THREAD

Lock stitch sewing with GORTEX thread eliminates the worry of U.V. damage to the stitching of your awning fabric.

WESTERN SUN SOLUTIONS

Vario-Volant, a vertical fabric drop at the front of the awning, solves many late afternoon western sun problems.

WARRANTY

Your awning carries a 10-year common sense warranty backed by professionally trained dealers.
